THE YEAR OF THE MICROCOMPUTER

This year, the complete micro-computer-on-a-chip for under \$10 will become a reality. As an indication of the current information vacuum, Adam Osborne's first book, AN INTRODUCTION TO MICROCOMPUTERS, sold out 30,000 copies in five months. This first book has now been expanded and split. Volume I in-

corporates Chapters 1 to 6 of the original and includes theory on the new chip slice products. Volume II goes into more detail on today's real products than most manufacturers. A third book is also available which explains program simulation of digital circuits using the Intel 8080.
